[Lesson 5 Homework Practice Factoring Linear Expressions Answers](#)

Name_____ Date_____

4.3 Practice A

Solve the system of linear equations by elimination. Check your solution.

1. $x - y = 4$
   $x + y = 2$

2. $x + 3y = 5$
   $2x - 3y = 1$

3. $4x - y = 7$
   $4x - 2y = 2$

4. You purchase 5 pounds of apples and 2 pounds of oranges for $9. Your friend purchases 5 pounds of apples and 6 pounds of oranges for $17.

   a. Write a system of linear equations that represents this situation.

   b. What is the price per pound for apples?

   c. What is the price per pound for oranges?

Solve the system of linear equations by elimination. Check your solution.

5. $2x + 3y = -2$
   $3x - y = -14$

6. $x - 3y = 1$
   $4x + 5y = 4$

7. $3x - 5y = 9$
   $6x - 6y = 6$

8. A 100-point test contains a total of 20 questions. The multiple choice questions are worth 3 points each and the short response questions are worth 8 points each.

   a. Write a system of linear equations that represents this situation.

   b. How many multiple choice questions are on the test?

   c. How many short response questions are on the test?

   d. If the teacher changed the test to 15 questions, then how many of each type of question would be on the test?

9. One customer purchases 8 bags of cat food and 2 bags of dog food. The total weight of the purchase is 44 pounds. Another customer purchases 5 bags of cat food and 2 bags of dog food. The total weight of the purchase is 35 pounds.

   a. You write the following system of linear equations to represent this situation. Is your answer correct?

   $$8x + 2y = 44$$
   $$5x + 2y = 35$$

   b. Your answer for the next step is $13x = 79$, which is incorrect. Explain the error.
